

Name: Chiam Jia-Yu, Jasmine

This display is a paper replica of the growth stages of the *Amanita muscaria*, also known as a Fly Agaric. It is meant to educate others about the cap development of the fungi.

The creative project is made with recycled materials (such as red packets and shoebox) in a bid to reduce wastage. Keeping the exhibition aspect in mind, language used in the project has been simplified to ensure the fungi facts are accessible to the layman.

The Fly Agaric has been selected as it is easily identifiable, with many interesting facts!
