

LSM3259 Creative Assignment
Megan Nim

Through this creative assignment, I wanted to enlighten others that fungi can come in different shapes and sizes and can be just as colourful as flowers. Thus, I embroidered 6 mushrooms of different colours (red, orange, yellow, green, blue, and purple) and included fun facts for each of them.

Red (*Amanita muscaria*)

Image reference:

<https://www.wolfriver.org/news-press/natural-highlights-the-amanita-mushrooms>

Fun fact: Common name (fly agaric) comes from its insecticidal properties against house flies

Reference:

de Mattos-Shipley, K. M. J., Ford, K. L., Alberti, F., Banks, A. M., Bailey, A. M., & Foster, G. D. (2016). The good, the bad and the tasty: The many roles of mushrooms. *Studies in Mycology*, 85, 125–157. <https://doi.org/10.1016/j.simyco.2016.11.002>

Orange (*Pycnoporus* sp.)

Image reference:

(taken during field trip)

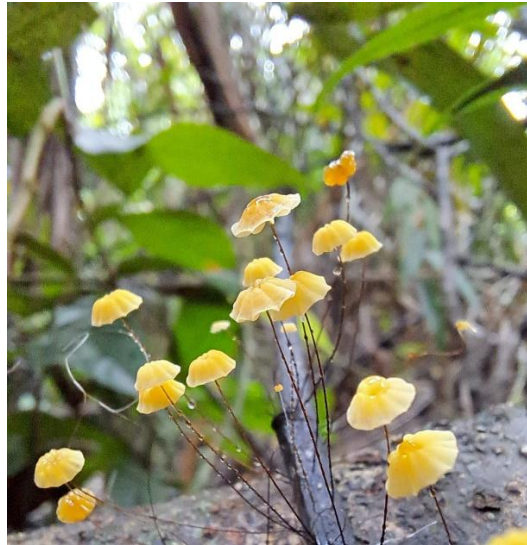

Fun fact: Orange pigment contains cinnabarin which has antiviral, anticancer, antibacterial properties

Reference:

Pigoń-Zajac, D., Matecka-Massalska, T., Łapiński, J., & Prendecka-Wróbel, M. (2025). Modern Pro-Health Applications of Medicinal Mushrooms: Insights into the Polyporaceae Family, with a Focus on *Cerrena unicolor*. *Molecules*, 30(20), 4089. <https://doi.org/10.3390/molecules30204089>

Yellow (*Marasmius guyanensis*)

Image reference:

<https://www.facebook.com/photo/?fbid=10162129048569174&set=pcb.8947419688660302>

Fun fact: *Marasmius* sp. are predominately saprotrophs that decompose forest litter and aid nutrient cycling

Reference:

Green (*Gliophorus psittacinus*)

Image reference:

<https://wildmacro.com/library/fungi/Parrot-mushroom-Gliophorus-psittacinus.html>

Fun fact: Can be found on stamps of Faroe Islands (Denmark) in 1997

Reference:

Wikimedia Commons. (n.d.). *Faroese stamps 1997*. Retrieved March 28, 2026, from https://commons.wikimedia.org/wiki/Faroese_stamps_1997

Blue (*Entoloma burkilliae*)

Image reference:

https://www.inaturalist.org/guide_taxa/1871271

Fun fact: *Entoloma* sp. produces a pink spore print and has angular to cuboid spores

Reference:

Tham, F.Y. & Chan, T.Y. (2009). A record of gregarious fruiting of blue *Entoloma* fungi at Bukit Timah Nature Reserve. *Nat. Singapore* 2: 121–124. <https://lkcnhm.nus.edu.sg/wp-content/uploads/sites/11/app/uploads/2017/06/2009nis121-124.pdf>

Purple (*Coniolepiota spongodes*)

Image reference:

<http://www.fungiphoto.com/CTLG/pages/0552-29.html>

Fun fact: The powdery surface of the cap is caused by velar remnants from veils of young mushrooms

Reference:

Hosen, Md. I., & Yang, Z. L. (2013). *Coniolepiota spongodes* (Agaricaceae, Basidiomycota) in Bangladesh and China. *Mycotaxon*, 124(1), 341–347. <https://doi.org/10.5248/124.341>
