

LSM3259 FUNGAL BIOLOGY: CREATIVE ASSIGNMENT

Name of student: Rachel Pang

Title: Mushroom Collectible Cards

I was inspired by Trading Card Games (TCG) (such as Pokémon) to design these character cards after different types of fungi that either “good” or “bad” for you.

There is a total of six collectible character cards. Three of them are fungi that are “evil” (Death Cap, Fly Agaric and Magic Mushroom) can cause harm to the human body if ingested. The remaining three are “good” (Mushroom of immortality, Baker’s Yeast and “Cyclosporin” mushroom) are found to have beneficial functions to humans.

The front of the card displays their characters, while the back of the card mentions their details (e.g. common name, scientific name, phylum and effects).

Their characters were designed with their functions / effects in mind, mixed in with some fantasy-inspired character designs (e.g. The Mushroom of Immortality is a paladin who protects and heals others).

They serve both educational and aesthetic purpose; providing concise informative content about the different mushroom species while also illustrating them in a visually appealing way that engages learning.
